

2026 NYCU Theory Day

國立陽明交通大學  
工程三館 EC022、EC016

你是否對演算法、計算理論、離散數學與圖論等主題感興趣？陽明交通理論日是為你打造的活動。我們在活動中邀請多位知名學者專家，透過演講分享的方式，帶同學們一窺演算法理論研究的樣貌～ 活動免費報名參加，各時段皆備有咖啡、茶點、餐點，立刻大手拉小手、選擇適合你/妳的時段報名參加吧！

Day I - Tuesday, April 21, 2026

|               |                                                                                                                                          |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------|
| 15:00 ~ 15:10 | Opening                                                                                                                                  |
| 14:10 ~ 15:10 | <b>Keynote Lecture I</b><br>Chair: <i>Ping-Chun Hsieh (NYCU)</i>                                                                         |
|               | Muon Outperforms Adam<br>in Tail-End Associative Memory Learning<br><i>Vincent Y. F. Tan (National University of Singapore)</i>          |
| 15:10 ~ 15:30 | Coffee Break                                                                                                                             |
| 15:30 ~ 17:10 | <b>Invited Session I</b><br>Chair: <i>Po-An Chen (NYCU)</i>                                                                              |
|               | The Shape of Time: Analyzing End-to-End Latency<br>Curves in Cyber-Physical Systems<br><i>Mario Günzel (Max-Planck Institute)</i>        |
|               | A Radius-Sensitive Approximation Algorithm for<br>Connected Submodular Maximization<br><i>Philip Cervenjak (University of Melbourne)</i> |

Day III - Thursday, April 23, 2026

|                                |                                                                                                                 |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 9:00 ~ 10:00                   | <b>Keynote Lecture III</b><br>Chair: <i>Bertrand Miao-Tsong Lin (NYCU)</i>                                      |
|                                | Voronoi diagrams in the presence of obstacles<br><i>Hee-Kap Ahn (POSTECH)</i>                                   |
| 10:00 ~ 10:20                  | Coffee Break                                                                                                    |
| 10:20 ~ 12:00                  | <b>Invited Session V</b><br>Chair: <i>Cheng-Kuan Lin (NYCU)</i>                                                 |
|                                | Algorithmic Matroid Intersection Coloring<br><i>Michael Zlatin (Pomona College)</i>                             |
|                                | Exploiting Tree-Like Structure in Graph Partitioning Problems<br><i>Nadym Mallek (Hasso Plattner Institute)</i> |
| 12:00 ~ 13:30<br>13:30 ~ 14:20 | <b>Lunch Panel</b><br><i>Yi-Ting Chen (NYCU) and Yung-Ju Stanley Chang (NYCU)</i>                               |
| 13:30 ~ 14:20                  | Open Problem Session                                                                                            |
